Shackles of the Native Land

In my hometown, individuals are often constrained by their native environment due to interpersonal relationships and possessions. Relationships among relatives, the importance of lineage continuity, and the excessive pursuit of land and property restrict personal growth and decision-making. These constraints stem from deep-seated notions of land belonging and clan loyalty. I aim to reveal how these societal constraints limit individual freedom and development, encouraging people to question and reconsider ingrained perspectives.

Color Board

I extract colors from photos taken in my hometown during my childhood to express my native environment.

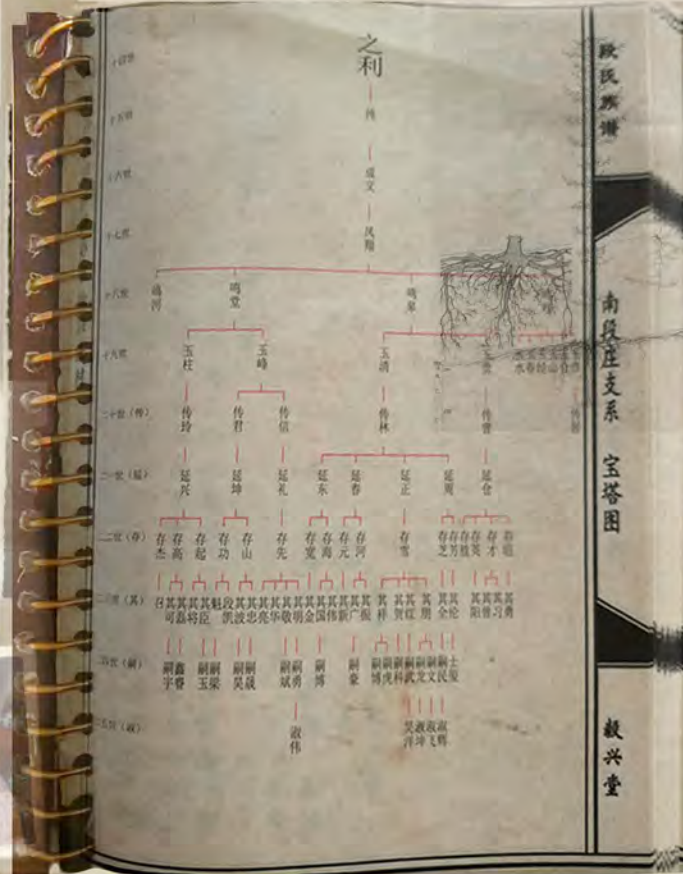

Fabric Development

Family relationship forms a branching continuum.

9

Family genealogy of DUAN, which reflects my connections within my native environment.

The texture of checkered homespun cotton fabric left a deep impression on me during my childhood in the countryside. To recapture this memory, I returned to rural areas and acquired handwoven fabric made on traditional looms to use as material for my clothing designs.

Fabric Source

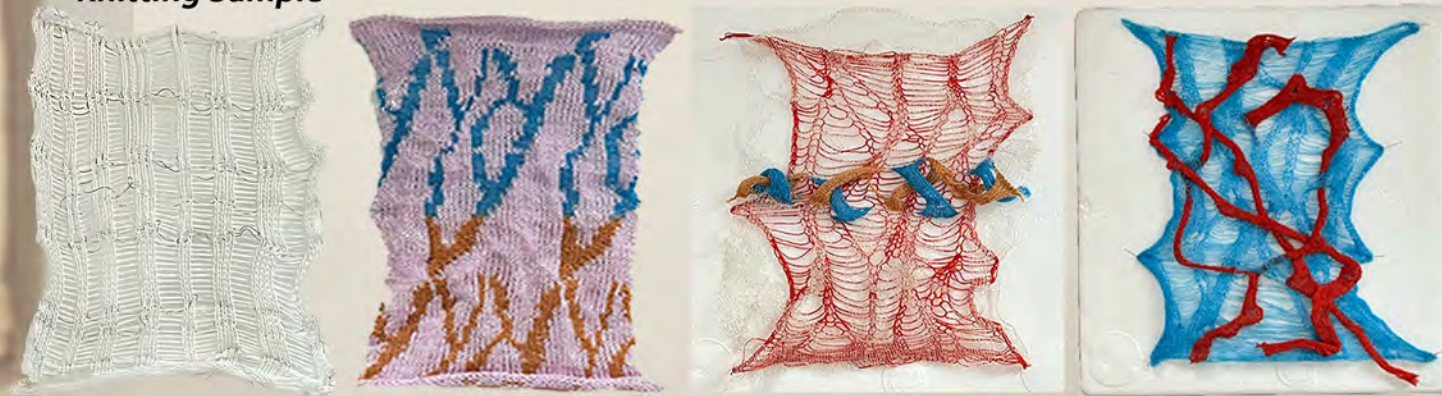

The structure of the foundation of the self-built rural houses reminds me of weaving wire into knitting.

Pattern Cutting Experiments

I spent my life stuck between a few places: my hometown, school, neighborhood, and the provinces, cities and districts where they are located.

Origami - construction

Pattern Structure

Origami folding imparts structural strength to a sheet of paper.

This transformation symbolizes the illusion of freely moving between different places while, in reality, being constrained by these very locations.

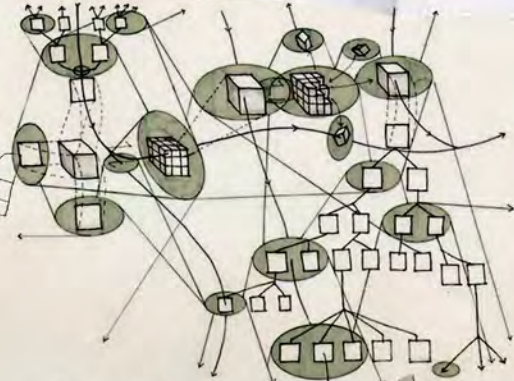

Folding along lines (Path)

I drew inspiration from Deleuze and Guattari's philosophical work A Thousand Plateaus. According to their 'stratification' theory, each layer of a person's historical cross-section does not coexist on the same time scale.

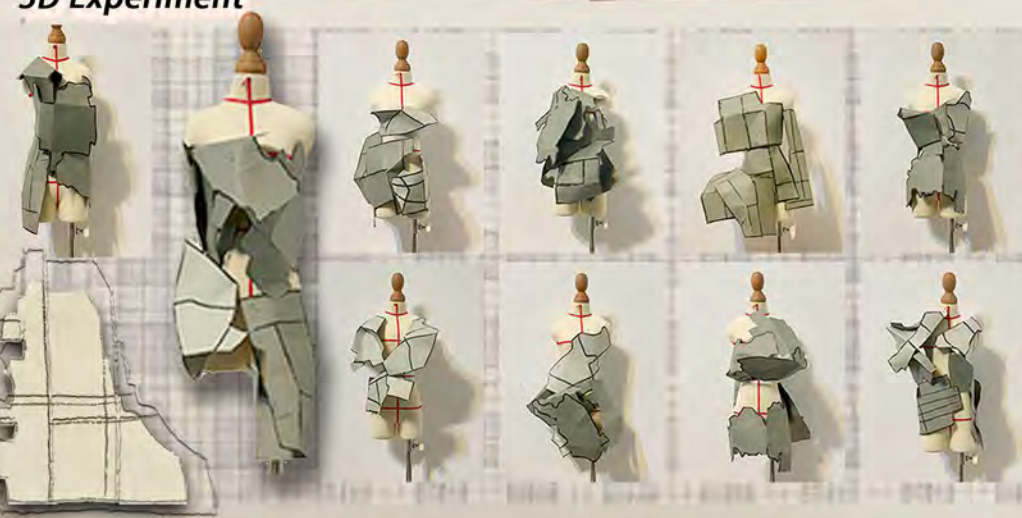

Illustrations by Marc Ngui for Deleuze Guattari's "A Thousand Plateaus".

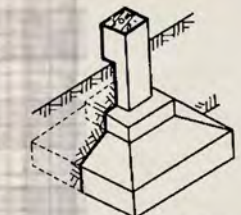

Experiment according research

3D Experiment

Thus, interactions like intersections, overlaps, conflicts, and collaborations occur between different layers. Combined with being confined to various places at different times, this illustrates how the constraints of these native environments shaped my growth.

Independent foundation

I drew inspiration from the construction of self-built rural houses. Just as a house is built layer by layer, starting with the foundation, a person's native environment forms the basis of their growth.
